

Research project 2007/2008

Rectorate

"Comparative analysis of the water of Tetova's net, highland villages and plain villages of Pollog"

Coordinator - Prof. Dr. Murtezan Ismaili

This project aims to do analyses of Tetova's and surrounding villages drinking water in order to come to concrete reports for the quality of drinking water. In order to achieve this objective it will be established team of experts who will do analyses of water on field and then after will prepare the report for their work. Institute of Environment and Health with this project will raise the opus of scientific research. This will help to institution that in future to undertake concrete activities for environmental and health issues for citizens, where water plays un important role.
