## Public Administration and Political Sciences

### “Investigating Sociological Terminology”

Coordinator Dr. Ali Pajaziti

Dictionaries, lexicons and encyclopedias are very important elements of scientific mosaic of every culture. Sociology as social discipline among Albanians for a long term (about 45 years) was a forbidden topic, “bourgeois science”. As a result of this classification Albanians have limped on building healthy and open society, they didn't manage to do this because they were missing the pillar of social engineering, as it is called other wise the sociology. This project aims to fulfill a big gap in the field of social sciences in general and particularly for Albanian sociology. It is a pioneer work there is no publication from this fields, so it is about authentic work *sui generis*. The writing will serve to the students of social sciences, intellectuals, journalists and to all interested person who want to absorb knowledgeal development.
